

ABSTRACT OF DISCLOSURE

A paper cassette for a printing apparatus including a pick-up lever having a pick-up roller at one end thereof and installed to be movable in the paper cassette. The paper cassette includes a cassette body to load papers therein to be picked up by the pick-up roller, a paper arranging guide member installed to be movable in the cassette body and arranging the trailing edges of the printing papers in a predetermined form, and a guide plate provided in a side of the cassette body to be opposite to the guide member for providing a predetermined frictional resistance for the leading edge of a paper to be picked up by the pick-up roller and having guide surface formed in a shape, so that a constant distance between the guide plate and the pick-up roller is maintained along the moving trace of the pick-up lever.
